

Week 6: Vowel Counter

Overview

This assignment turns Week 6 concepts into a small, finishable Java program or project milestone. Start from the provided template, preserve the public class filename, and run the program in IntelliJ before submitting.

Objectives

- Traverse a String with a loop.
- Use charAt and length.
- Accumulate a count.

Required reading - one new chapter

- [Think Java Chapter 6 - Loops and Strings](#)

Optional supplemental reading - previously covered chapters

- [Chapter 5 - Conditionals and Logic](#)

Interactive practice

- [Runestone: loops and Strings](#)

Supplemental videos

- [For loops](#)
- [String methods](#)

Complete these steps

- Create Week06VowelCounter and a class named VowelCounter.
- Copy the starter into VowelCounter.java.
- Prompt for one word and read it with nextLine().
- Convert the word to lowercase.
- Use a for loop from 0 up to, but not including, word.length().
- Use charAt(i) to get the current character.
- Increase vowels when the character is a, e, i, o, or u.
- Print Vowels: followed by the count.
- Run with education and confirm Vowels: 5.
- Run with rhythm and confirm Vowels: 0.
- Submit VowelCounter.java.

What will be checked

Use this list as your final review before submitting.

- A for loop traverses the String.
- length and charAt are used.
- education produces a vowel count of 5.
- rhythm produces a vowel count of 0.
- The submitted file contains no unfinished TODO marker from the starter template.
