

Week 15: Personal Project Part 2

Overview

This assignment turns Week 15 concepts into a small, finishable Java program or project milestone. Start from the provided template, preserve the public class filename, and run the program in IntelliJ before submitting.

Objectives

- Integrate String processing, loop-based validation, and collections.
- Deliver a dependable program with clear run instructions.
- Explain and demonstrate the completed design.

Project work week

No new Think Java chapter is assigned for this project milestone.

Optional supplemental reading - previously covered chapters

- [Chapter 5 - Conditionals and Logic](#)
- [Chapter 6 - Loops and Strings](#)
- [Chapter 11 - Designing Classes](#)
- [Chapter 13 - Objects of Arrays and ArrayList](#)

Complete these steps

- Copy your working Part 1 project into a new IntelliJ project or a clearly labeled Part 2 folder before making changes.
- Keep the original purpose working while adding the requirements below.
- Review LOOP_BASED_INPUT_VALIDATION_GUIDE.md before implementing validation.
- Use meaningful String manipulation that changes, searches, formats, or analyzes project text.
- Use a loop to keep asking until at least one important user input is valid, and display a helpful prompt after invalid input.
- Use an array or ArrayList to store and process the project's related data.
- Preserve the foundational Part 1 requirements unless your approved design makes one unnecessary and your instructor approves the change.
- Test the complete project from a clean start, including invalid input and an empty collection.
- Follow PROJECT_README_CHECKLIST.md when updating README.md with every required file, exact OpenJDK 26 and IntelliJ run steps, and sample input/output.
- Follow PROJECT_PRESENTATION_GUIDE.md when recording a 5-10 minute presentation that explains the design changes, demonstrates the full workflow, and identifies the Java concepts used.
- Submit all Java files, README.md, and the presentation in the locations specified by your instructor.

What will be checked

Use this list as your final review before submitting.

- 25 points: the expanded project runs and completes its main purpose without major errors.
- 15 points: the presentation explains design changes, demonstrates the complete workflow, and identifies required Java concepts.
- 15 points: the presentation follows a clear sequence, stays within 5-10 minutes, and is easy to understand.
- 10 points: readable organization and naming.
- 10 points: meaningful comments.
- 10 points: an array or ArrayList stores and supports meaningful project operations.
- 5 points: meaningful String manipulation.
- 10 points: a loop rejects invalid input, explains the problem, and continues until the input is valid.
- The submitted file contains no unfinished TODO marker from the starter template.
